TFDOUBTCLASS2103

main.tf
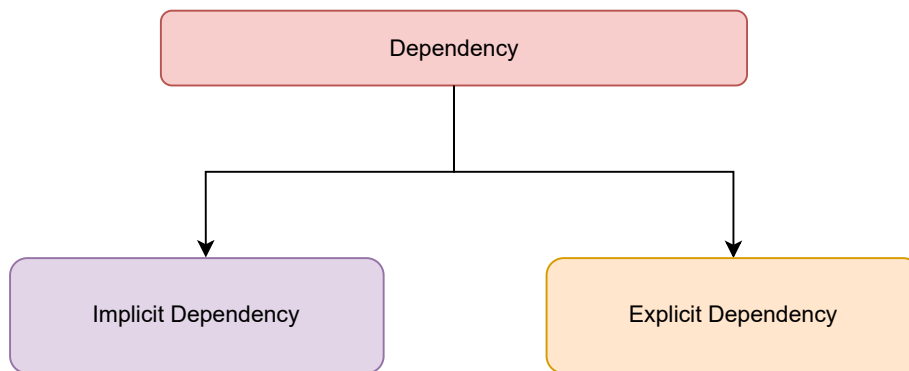

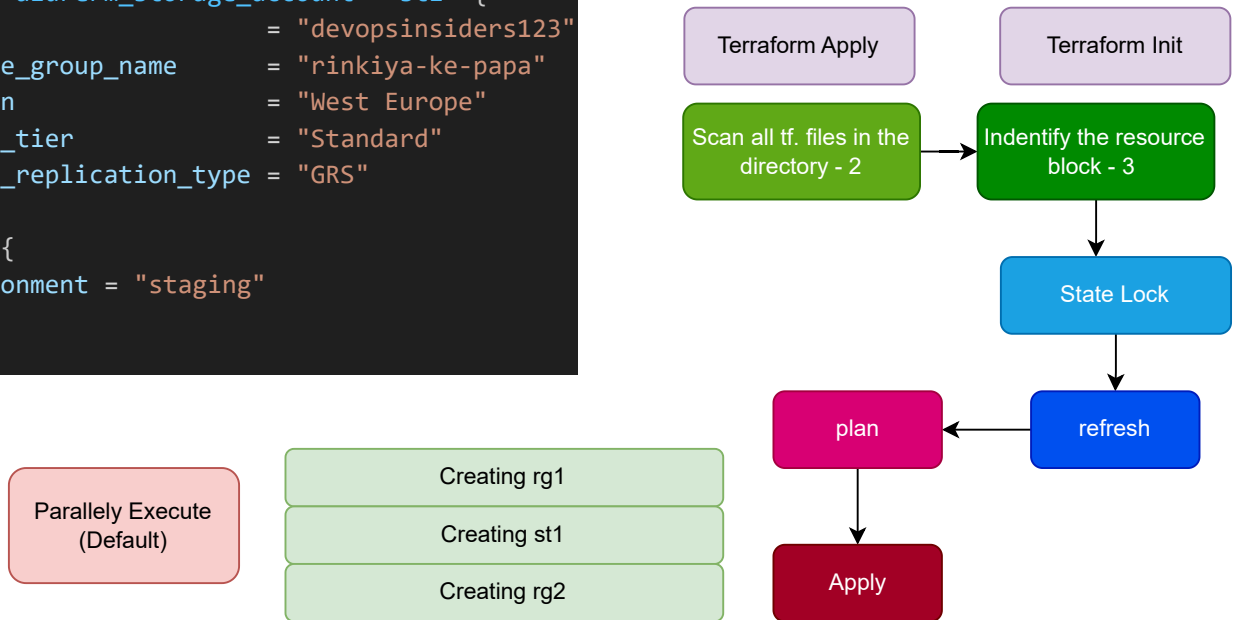

```
resource "azurerm_resource_group" "rg1" {
  name     = "rinkiya-ke-papa"
  location = "West Europe"
}

resource "azurerm_storage_account" "st1" {
  name                     = "devopsinsiders123"
  resource_group_name      = "rinkiya-ke-papa"
  location                 = "West Europe"
  account_tier             = "Standard"
  account_replication_type = "GRS"

  tags = {
    environment = "staging"
  }
}
```

rinkiya.tf

```
resource "azurerm_resource_group" "rg2" {
  name     = "rinkiya-ki-bahu"
  location = "West Europe"
}
```

Terraform Apply

Terraform Init

Scan all tf. files in the directory - 2 → Indentify the resource block - 3

State Lock

refresh

plan ← refresh

plan → Apply

Parallely Execute (Default)

| Creating rg1 |
| Creating st1 |
| Creating rg2 |

Dependency

Implicit Dependency

Explicit Dependency

Ek Teer se do nishane

Direct depends_on likh do

Use a value from one block to another

Ek block dusre block pr dependent ho jaega

Non-Duplicacy Wala code hi sahi hai...
